

# GREEN SOLUTIONS

Going Green Makes Dollars & Sense

DYNAMIC SYSTEMS INC.®

Your Data Is Our Business

**D**ID YOU EVER THINK that data management could have an effect on the environment and your bottom line? To deal with the rapid proliferation of data, many companies have simply added more and more systems to their infrastructures. This “system sprawl” is a quick fix, but ultimately causes businesses to waste time, money and resources.

By teaming up with leading manufacturers and supporting vendor products, Dynamic Systems helps companies overcome sprawl with these Green Solutions:

**Enterprise Consolidation.** Reduce costs of managing multiple systems while improving backup efficiency, reducing high electricity and cooling costs and maximizing system availability by using a combination of servers, storage, software and Symantec products.

**Virtualization.** Save energy by allowing a single system to host multiple desktops, server images, or storage and reduce the number of physical systems required, while significantly increasing utilization of each system. Virtualization can increase hardware utilization by five to twenty times, allowing you to dramatically reduce the number of power-consuming servers in your datacenter.

**Thin Client.** Streamline maintenance and cut power consumption with eco-friendly thin client technology, which offers a quiet running system with a small footprint and drastically low power consumption that will put you in the new trending class of Green.

## KNOW THE COSTS

The fact is that the majority of data center managers have no idea what their company spends on electricity and power consumption. Enterprises are wasting a lot of money and need new strategies to become more efficient.

Let the experts at Dynamic Systems show you how easy it is to go Green. Visit us online at [www.DynamicSystemsInc.com](http://www.DynamicSystemsInc.com) or call us at **310.337.4400** to learn how you can better meet today's priorities — and overcome tomorrow's challenges.

## KEY BENEFITS

Simplify Complex  
IT Infrastructures

Increase Data Center  
Efficiencies

Reduce IT Costs

Overcome Power and  
Space Limitations

Improve Overall Performance  
of Desktop, Server and  
Storage Systems

Optimize Existing Technology

Dramatically Reduce  
Your Systems Footprint

Going Green Makes Dollars & Sense

DYNAMIC SYSTEMS INC.®

Your Data Is Our Business

**WHY DYNAMIC SYSTEMS?** Dynamic Systems designs and implements solutions to make everyday data management simple. We go beyond the role of technology implementer and act as data management mentors and trainers for our customers. Since 1991, Dynamic Systems has garnered a solid reputation in the government/education space as the IT experts of choice. Dynamic Systems is an Oracle Platinum Partner and one of a few Oracle providers to have a full GSA schedule.

Our boutique shop offers more than leading products. We design solutions with a big picture view, filling a void for enterprises in the area of IT staffing and expertise. While designing solutions to best meet customer needs, we always take into account long-term business objectives and budgetary requirements. As a small, minority-owned business with security clearances and many contract vehicle options, we make it very easy for government and education customers to work with us.

## GET STARTED TODAY

As you search for environmentally- and business-friendly IT solutions, turn to the experts to ensure that you don't relinquish security, resilience or performance. Dynamic Systems has the experience, insight and technical expertise you need to succeed.

Call us at **310.337.4400** to learn more about how our Green Solutions can help your business save money and improve efficiency.

## WHY GO GREEN?

When it comes to "Going Green," the call to re-use and recycle extends into the datacenter and throughout your IT infrastructure.

Targeting waste, tackling capacity and asset management are great places to start. You can also cut energy costs and improve the overall ROI of your datacenter assets with optimization.

Optimization lets you save money and better utilize your current IT assets. By reducing or eliminating both unused and inefficient applications, you'll see improvements in productivity, performance and your bottom line.

Once you've optimized current resources, take the time to carefully evaluate new high-performance energy-efficient technologies from Dynamic Systems. Call us today to learn more about solutions designed to enable higher utilization levels and help you address the skyrocketing costs of power, space and cooling.
